

# THE FUTURE OF GARMENT PRINTING, NOW!

## IPT A to Z

**1** Print film positive on the VersaJet and burn the screen(s).

**2** Print a test image to register the screen(s).

**3** Screen on a white base or discharge, or print using white inks.

**4** Return garment to VersaJet for full color digital print.

**5** Perform final curing via conveyor oven, heat-press or other dry, hot air process.

# VersaJet

The Professional's Choice

MADE IN THE USA

VersaJet is the only D-T-G printer capable of seamlessly bringing together traditional screen and digital printing technologies, thanks to our patented Integrated Printing Technology (IPT). With VersaJet, you gain a clear advantage in output quality, speed and sophistication. As the name implies, the VersaJet is designed for maximum versatility in ink selection and the ability to print on a variety of media types and sizes. It comes standard with a flatbed for printing film and other substrates up to 4" thick. With the standard TOPAZ RIP™, the VersaJet can be loaded with two ink sets simultaneously, providing you with the ability to print on both cotton and polyester at the same time. As the fastest production system in its class, the VersaJet is perfect for sampling, short runs, or all-out production. VersaJet has the shortest payback in the business, as few as 4-6 weeks.

*Powered by Topaz RIP™.*  
The software of choice for DTG Printing.
